## **Comrac Ltd and Sinetica Corporation merge to form Unite Technologies Ltd**

***A dynamic new company with an established pedigree, offering an unrivalled and fully supported turnkey capability, providing data centre and network infrastructure market-leading technology.***

**Comrac Ltd and Sinetica Corporation Ltd, two of the UK's leading exponents of Data Centre Infrastructure systems have merged to form a dynamic new company, Unite Technologies Ltd.**

Unite Technologies provides a unique integrated product and service competence primarily to the data centre and network infrastructure sector. They offer technical expertise ranging from site evaluation and design to integrated cabinet installation; power delivery, monitoring & outlet control; environmental management, alarming and reporting; cabinet and room security and remote access and detailed data capture using industry standard integrated databases.

Management Information derived from sophisticated reporting, enables customers to perform data centre capacity planning and trend analysis whilst assisting greatly in carbon reduction initiatives.

Furthermore, Unite Technologies promotes a complete suite of Professional Services ranging from full life cycle project management methodologies to a highly experienced team of IT software and hardware development engineers, ensuring a seamless integration with customers' existing or planned systems.

Sinetica, an established and trusted British brand of leading edge product, designed for the planning, monitoring, control, reporting and system integration of data centre solutions and Comrac, a leading data centre and network solutions provider, with an enviable blue chip customer portfolio, have long enjoyed a close trading and technical relationship, successfully executing many large projects through their combined capability. Simon Terry, Chief Executive of Unite Technologies states, "The merger is a natural progression that will ensure the closer alignment of product development to customers' requirements, whilst significantly enhancing service levels".

Unite Technologies has offices located in the UK and North America supported by a dedicated R&D Technology Centre with multiple partners positioned across Central, Eastern and Southern Europe and Asia Pacific.

Simon Terry commented "The merger will enable Unite Technologies to deliver to our customers a fully integrated low risk solution currently unrivalled in the market place," adding "We intend to rapidly expand and further exploit our undoubted lead in this area by providing customers with an array of new opportunities through product and service innovation".
